

Minority language communities, technology and social networks

Daniel Cunliffe – University of South Wales

Digital Language Vitality

- Digital fitness
 - Connectivity, digital literacy, keyboard...
- Digital presence and use
 - Presence and use of digital media, production, social media...
- Digital performance
 - Range of things that can be done using the language - prestige, authority, identity...

Digital Ascent

Stage	Characteristics	
Thriving	extensive digital use by both native and foreign speakers and well supported with software resources from both Apple and Microsoft	
Vital	digital use by native speakers, but lacking software support from Apple and Microsoft	
Emergent*	community use of texting and social media, digital use mainly private and informal	
Latent*	digital ascent is still possible, but not currently evident	Heritage there are archived digital materials for the language, but no current digital communication by native speakers
Still	there is no observed digital use of the language and digital use is very unlikely to occur in the future	

Kornai, A. (2013) Digital Language Death. *Gibson, M. (2015) A framework for measuring the presence of minority languages in cyberspace.

Social Media Benefits

- New domain for language use
 - Particularly for written language
- Connects speakers
 - Low speaker density, mobility, diaspora
- Affective benefits
 - Modern, cool, appeals to young people

Decreasing share of voice

- “...new media, including broadcast media and the Internet, usually serve only to expand the scope and power of the dominant language at the expense of endangered languages.” (UNESCO, 2003, p11)
- Increased share of majority voice in traditional media
- Increased share of majority voice in digital media
- Increased share of majority voice in social media
- Multiply the share of voice of the majority language
- Penetration into the home and social sphere
- Increasingly personal, increasingly on!

Necessary conditions

- Grin argues for a language to be used, people must have:
 - The capacity to speak the language
 - written form, read and write
 - The opportunities to do so
 - digital literacy, affordable, low technology barriers... perceived as opportunity
 - The desire to use the language
 - desire to use social media

Youth

Desire: Language

<<There isn't anything stopping us from using Welsh on the web, we're just lazy. We can't be bothered to speak Welsh.>>

<< ...after we leave school every computer we see will be in English. If we learn how to do things in Welsh it will be more difficult to do things in English, because we wouldn't understand what the words say.>>

Adults

Desire: Twitter

- Connect with others (37.9% of responses)
- Curiosity (33.6%)
- Share information (22.5%)
- Business/work related (22.5%)
- ...
- Welsh community (4.7%)
 - The respondent made specific reference to using Twitter to connect with, or share information about, the Welsh cultural community, including (but not limited to) the Welsh language.

Opportunity: Language Policy

“while SNS are sometimes seen as unregulated spaces, they in fact represent highly regulated linguistic environments...” de Bres

Adults

Opportunity: Expectation

- Respondents were asked how many tweets they expected to read and write in Welsh before they started using Twitter:

n=263	None	Some	No idea
Reading	13%	61%	26%
Writing	18%	54%	28%

- Indicates the extent to which Welsh language use online has become normalised and is expected to be used in new online domains.

Opportunity: Social Proof

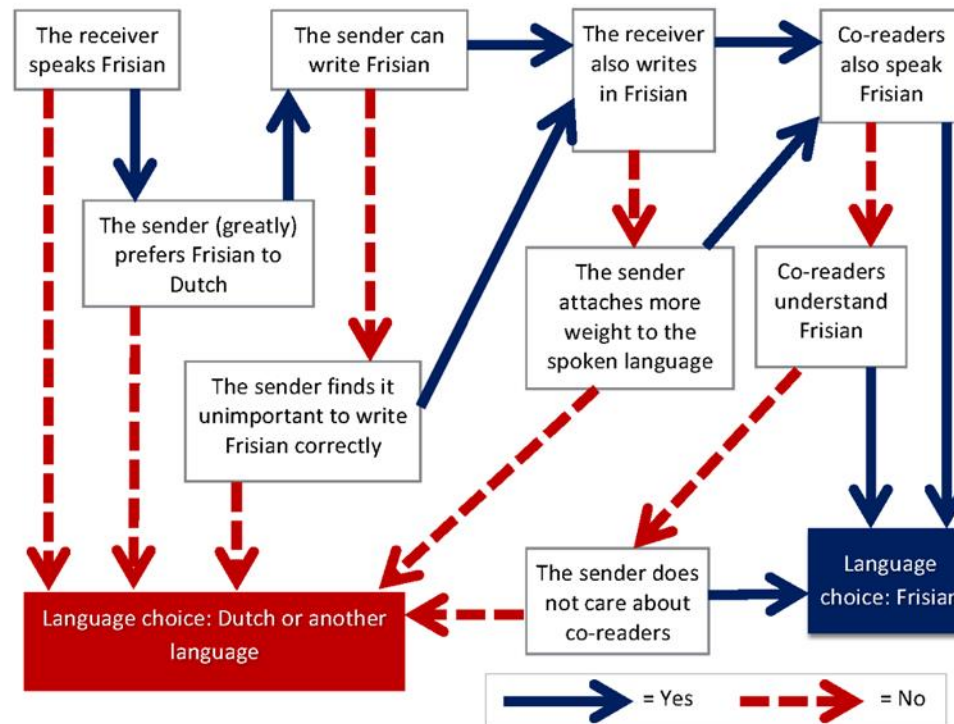

- Mentrau Iaith Cymru identified factors which Welsh speakers believed inhibited the use of Welsh in social media, these included:
 - a lack of Welsh-language content on social media as compared to English language content;
 - other Welsh speakers lack of use of the language on social media, particularly lack of use by famous or influential Welsh speakers;

Youth

<<When I joined Facebook, some of my Welsh friends were there, and only they were there, so I spoke Welsh with them and it's carried on.>>

Language Choice

Schematic language choice model for Frisian and Dutch on social media

Audience

- Welsh, Frisian, Irish...
- Generally the intended audience appears to be the single biggest determiner of language choice across social media platforms among those who use minority languages.
- Probably under-reports those who simply choose not to use it.

Individuals

- Individuals tend to speak just one language with another individual and do not change according to the medium of communication.
- Specific (known) audience – more likely to be in shared minority language
- Language use on SNS an extension of language use in peoples daily lives.

Wider audiences

- Wide, general audience – more likely to be in majority language
 - Original tweets, status updates...
- Likelihood increases as perceived proportion of minority language speakers in the audience falls...
...share of voice influences production as well as consumption
- Desire to reach a wider (international) audience
- Not wishing to appear rude – language politeness
- Majority language default when minority language proficiency not known

Audience on Facebook ^{Youth}

<<It depends on what language I would usually use with them in school and around.>>

<< It depends if their first language is Welsh or English. If they usually speak Welsh in their home with their parents, I'll write in Welsh to them, so that if their parents see it, they know that they still speak Welsh with me. If they usually speak English, as a first language, I'll speak English with them. >>

<< It depends who are the majority of people who need to understand it. >>

Choice on Twitter ^{Adults}

- To direct to a specific audience (54.1% of responses)
<<If I want to connect with another person who speaks Welsh.>>
- Topic-related (42.6%)
“If the tweet were relative to the Welsh language, culture or media; sometimes if related to other Celtic languages or linguistics. I’ll occasionally tweet in Welsh if it’s related to my current location in Wales, such as my hometown, university, or the weather.”
- Tweeting in Welsh feels natural (13.1%)
<< Welsh is my natural language, it feels odd to tweet my ideas/thoughts/comments in English.>>

Different SM Platforms

- Jongbloed-Faber observed differences in the likelihood of Frisian being used on WhatsApp, Facebook and Twitter, suggesting that the platforms support different types of audience and ties.
- Many Welsh-speakers appear relatively unconcerned that their Welsh-language content uploaded to YouTube may be viewed by non-Welsh-speakers.

Youth

“This is a short clip of the beginning of our GCSE Drama performance. If you don't understand the language its because its welsh.”

- Might in part be due to the less critical role of language in the predominantly audio-visual nature of YouTube content.

The Network

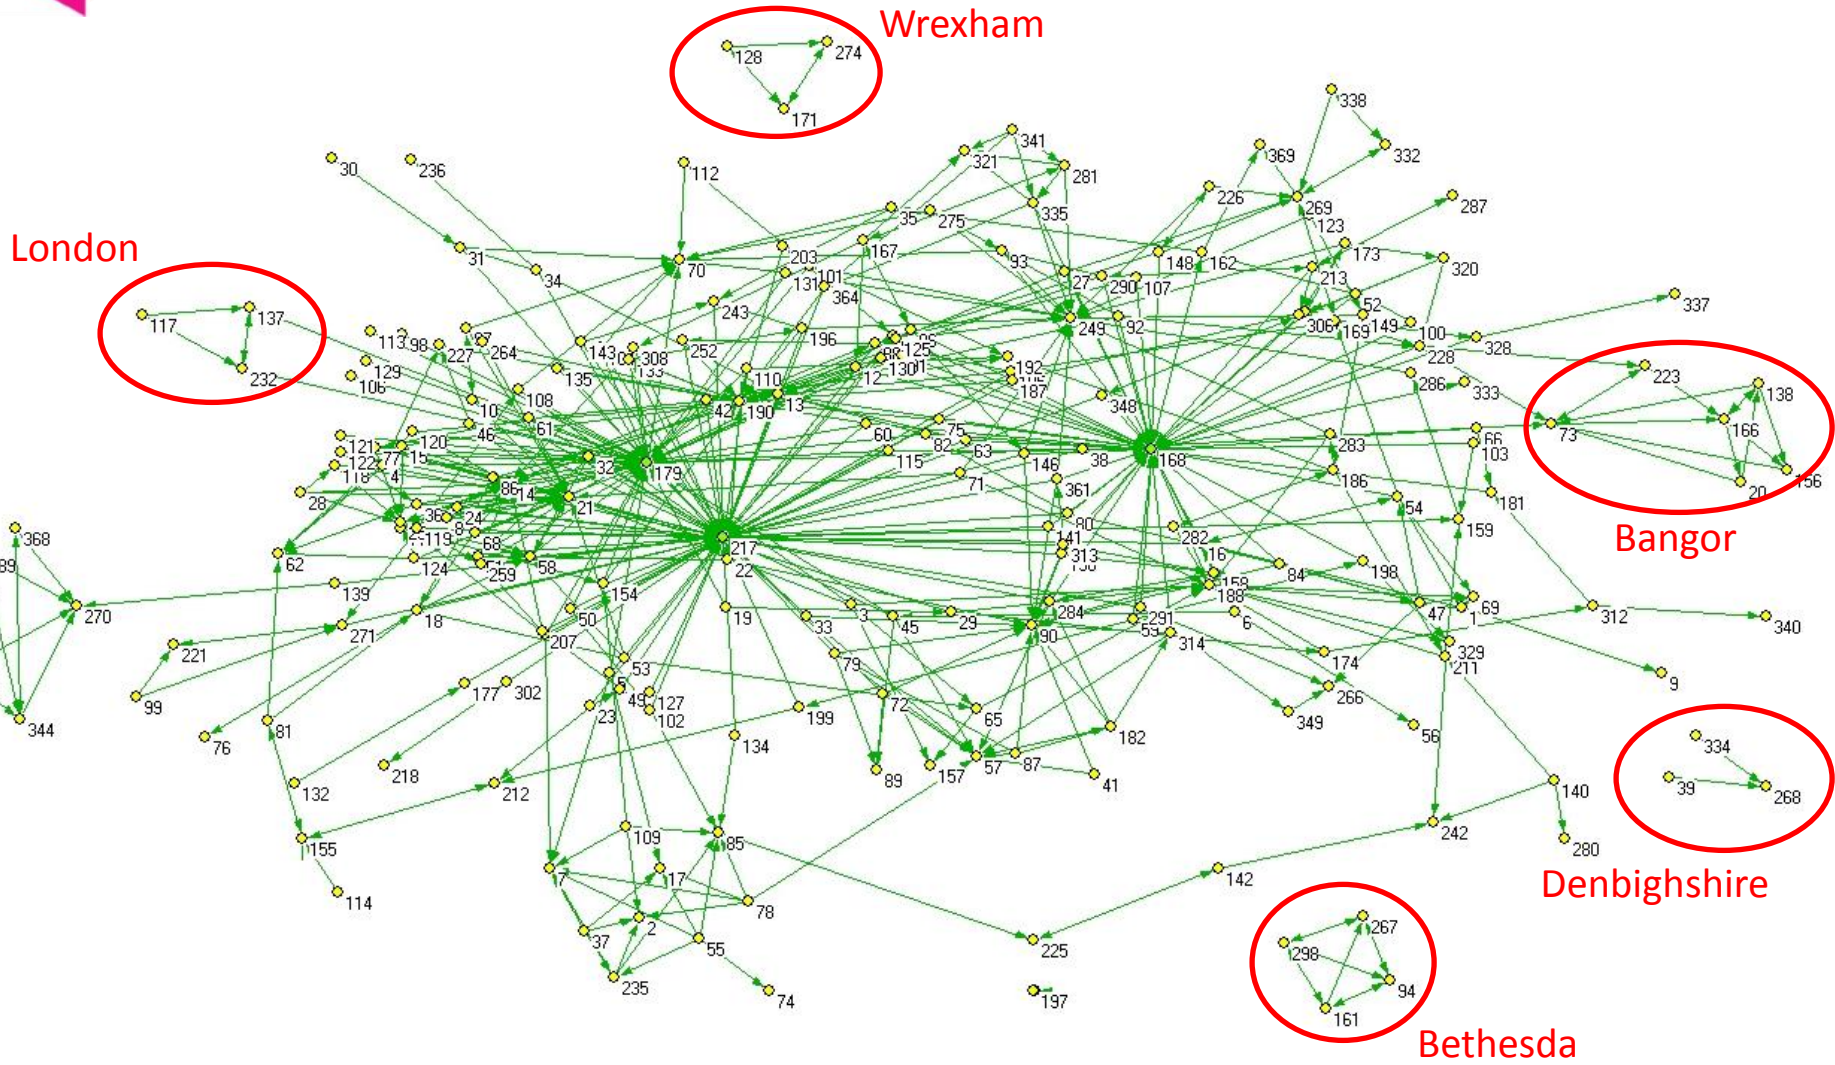

- People create their own audience and choose which audiences to be a part of.
- To some extent, and not necessarily deliberately, they control share of voice.

Social networks

<<I would say, even though we are in school with each other all day, we just speak with us! We have other friends who we've known over the years, but most of the time, we keep in touch with our closest friends.>>

<<People I know from school. People in my year who I like, but if I don't like them I don't add them. Also, because I used to live in America, I have lots of friends over there.>>

Share of voice

- The groups in which Welsh was used had more than double the proportion of Welsh speakers than the general population.

Share of voice

<< Our Facebook is a Welsh section of the Internet, where our friends speak Welsh.>>

<< You have Welsh groups, so you are encouraged to speak Welsh. I think there are much more Welsh speaking people on it. >>

[R1] << Apart from Facebook, there aren't a lot of websites that have Welsh. >>

[R2] << MSN and hotmail are in English, Twitter is in English . . . >>

Adults

Twitter networks

- Respondents (n=240) were asked if they were more or less likely to follow someone on Twitter if that person tweeted entirely or mainly in Welsh.

negative	neutral	positive
4%	36%	60%

- 32.9% would be 'much more likely to follow them'.
- Networks of Welsh speakers with relationships that cut across the boundaries of friendship and Interest-based networks.
- Networks with more Welsh speakers than would otherwise expect to be the case – greater share of voice

Twitter conversations

Twitter conversations among top 500
Tweeters in Irish and Welsh

Conjecture

- If we can influence the network...
we can influence the share of voice...
- If we can influence the share of voice...
we can influence the use of the minority language.

The Network

- Social influence.
- Role of recommender algorithms.

- Building networks.
- Aggregating content.
- Creating ghettos.

S4C

Mae cyllideb S4C wedi'u lleihau 40% ers 2010, gyda thoriad grant y Llywodraeth i'r Sianel o 93%, ac mae ansicrwydd am sefyllia ariannol y sianel dros y blynyddoedd nesaf.

Mae presenoldeb y Gymraeg yn y cyfryngau yn hollbwysig i bawb yng Nghymru a bod gan bawb hawl i'r Gymraeg.

Mi fydd amryw o siaradwyr gwadd yn y rali, gan gynnwys ASau a gwynbau cyfarwydd S4C.

RALI CYLLIDEB DEG I S4C YN SGWâr TREF CONWY AM 1.00YH, DYDD SADWRN Y 28/11/15.

S4C

S4C's funding has been cut 40% since 2010, with 93% cuts to the channel's Government grant, and there's uncertainty about the financial position of the channel in the coming years.

The presence of the Welsh language in the media is vital for everyone in Wales and that everyone has the rights to Welsh.

There will be a variety of guest speakers at the rally, including MPs and familiar faces from S4C.

FAIR FUNDING RALLY FOR S4C IN CONWY TOWN SQUARE AT 1.00PM, SATURDAY THE 28/11/15.

Conclusions

- Technology acts as a multiplier for the majority language share of voice.
- Share of voice in a social network influences consumption of the minority language, but also its production.
- It may be possible to increase minority language use by increasing the share of voice in particular spaces within social media.

END

Businesses banned from advertising in Welsh on Twitter prompting complaints from firms

The social media giant says it doesn't support the language, prompting businesses to claim the social media company is suppressing minority languages

    **810** SHARES

BY LYDIA MORRIS
09:06, 19 AUG 2015 | UPDATED 10:27, 19 AUG 2015

NEWS

Hello,

Thank you for your interest in Twitter Ads. It looks like you are Tweeting in Welsh. Unfortunately Welsh is not one of our supported languages at this time.

Currently, small business advertisers who are located in our open countries are eligible for Twitter Ads. It is not possible to target other countries at this time, advertisers must have a valid billing address and be Tweeting in Afrikaans, English, Spanish, French, Italian, Dutch, German, Hebrew, Japanese, Finnish, Norwegian, Swedish and Danish.

RECOMMENDED
